[ADTEC Full Automatic Exposure System](#)

ADTEC Automatic UV Exposure System for High Definition Board

[Call for Pricing](#)

The ADEX5100 Series is the highest precision model with U-Shape vacuum contact method exposure machine, equipped with a step&repeat shutter in order to improve film to panel accuracy, a requirement for high density PCB production. [\[Product Details...\]](#)

ADTEC Automatic UV Exposure System for Patterning (ADEX3000P)

[Call for Pricing](#)

The ADEX3000P is available with dedicated vacuum contact method or patented Air bag contact method. Improvement in board transportation, contact method, cleanliness and alignment allow stable manufacture of today's higher quality boards. [\[Product Details...\]](#)

ADTEC Automatic UV Exposure System for Solder Resist (ADEX3000S)

[Call for Pricing](#)

The ADEX3000S is fully automatic exposure system for solder resist imaging process. Requirements for accuracy and high productivity have been successfully addressed. A special function is added to prevent or minimize adhesion to resist substrate. [\[Product Details...\]](#)

ADTEC Step & Repeat Projection Exposure System (ADEX4000P/S)

[Call for Pricing](#)

This projection-type automatic exposure machine for printed circuit boards features a step and repeat system. A wide surface area can be covered by a single exposure due to the fact that the machine is equipped with a magnified-projection lens. Th [\[Product Details...\]](#)

Double Sided Simultaneous Exposure System (ADEX2200P)

[Call for Pricing](#)

ADEX2200P is an automatic exposure system, developed specifically for inner layer process. A significant improvement in productivity has been achieved by exposing both side simultaneously. Top and bottom artwork film are automatically aligned to each o [\[Product Details...\]](#)
