LASER FRONT

Price: [Call for Pricing](#)

Welding & Cutting

Laser technology that gives very stable, high energy concentrated, high-speed control combined with optimal wavelength and processing condition settings allows for high grade welding and cutting of various materials. Through the 30 plus years of processing know-how we have accumulated, Laserfront consults on high-quality processing across the board.

Metal

With our abundant product line-up, we can provide high-speed welding and cutting for railway carriages and vehicle bodies as well as the processing of precision parts for miniature motors. With an abundance of experience in the showroom, our technical staff offer support from sample processing to system implementation.

Miniature motor bearings

Battery tab fitting

CCFL back-lights

optical module

MR head for HDD

Lithium ion batteries

Automotive components

Electronics components for Automotive

Sheet metal processing

Vehicle bodies

Railway carriages

Sheet metal processing

Plastic welding

A totally dry, non-contact process allows welding of types of plastic that vary in transmission factor. Expectations are high for it to feature as an alternative bonding technology to adhesives.

Plastic welding
