ADTEC Thin board Mylar Peeler

Price: [Call for Pricing](#)

Features

Clean peeling off

- Proprietary peeling method using adhesive rollers without any air-blow minimizes the generation of particle contamination from the PCB.
- An optional HEPA-filtered down-draft air flow available to further reduce contamination.

Simplified set-up

- Does not require any set-up between different board sizes and thickness.
- Mispooled boards are stored in the NG board stacker up to 4 panels.
- Ultrasonic sensor detects peeled film.

Applicable to ultra thin boards

- The knurled roller movable to side ensures the film is peeled off easier.
- Holding the board's leading edge with a mechanical chuck prevents the typical problem of thin boards being rolled into the adhesive rollers.
- Close-centered rollers in the conveyor provide more stable board transfer.
