## **ADTEC LCD Manual Pattern Checker (LPC-500M)**

Price: [Call for Pricing](#)

## Features

1. High speed measurement of OLED or STN multiple printed panels. Sweeping is provided to the board in constant speed free from any effect due to the number of the printed panels. Therefore, there is no delay in the inspection time no matter the number of printed panels or lines increase. This pattern checker is suitable to the measurement of the portable phone or PDA terminals with many printed panels or middle and small sized multiple printed panels of OLED or STN panels.
2. Jigless inspection and easier setting-up. Setting up can be made just by re-arranging the needle holder, which eliminates the jig preparation for each substitute, resulting in a cost reduction after the pattern checker has once been introduced.
3. High density pattern pitch applicable. The needle holder deemed a core of the pattern checker of the tracing type equipped with a mechanism, a fruit of our own know-how, has been doing stable measurement of the fine pitched board and coping with a scratch to very delicate board.
